1. Please read the product instructions carefully, choose the type according to the function and power you need, and avoid the damage caused by wrong wiring. 2. This frequency converter can not drive other load types except inductive load such as.

GD20 Series Open Loop Vector Control Drives 22kW~30kW, 3PH 380V GD20 Series Drives have excellent drive and control performance for using of sensorless vector control technology, and improve usability and reliability for the enriched hardware configurations and software functions, meeting different.

Forward, reverse, start and stop controlled by panel or external terminals. 2. Adjust speed by panel potentiometer or external potentiometer. 3. Built-in brake unit (for connecting brake resistance). 4. PID function (Constant pressure water supply). 5. Multi-stage run. 6. RS485 communication.

Dc 24v to 380v inverter are critical components in the realm of electrical equipment and supplies. These devices serve the essential function of converting electrical power from one form to another, thereby enabling

compatibility between different electrical systems and devices. They are.
