# Angola s grid-side energy storage policy

## Overview

---

Luanda's grid-side energy storage policy represents a critical step in balancing Angola's growing energy demands with sustainable development goals. By addressing technical challenges and leveraging proven storage technologies, the city can unlock its full potential as a regional energy hub. Does Angola have an electrification plan?

In pursuit of this objective, Angola has undertaken significant efforts to both increase its electrification rate and diversify its energy sources. One of the recent milestones in this endeavour is the approval of the General Guidelines for the Rural Electrification Plan in 2023.

How much electricity does Angola produce in 2021?

Hydro, however, remains a significant player in the energy landscape being responsible for the production of 3,676 MW of electricity in 2021. More recently, the Angolan Government has been taking steps towards increasing the country's solar energy capacity.

How many solar power plants are there in Angola?

The first two Angolan solar power plants are under construction in the municipality of Biópio and Baía Farta, Benguela province. The project totals more than 500,000 solar panels and the solar energy production has a capacity of 285MW. In 2023, the construction of one more solar power plant was launched in Namibe province.

Can Angola become a solar energy hub?

By harnessing the abundant solar potential, Angola aims to reduce its reliance on traditional fossil fuels, such as oil and natural gas, and unlock its potential to become a prominent solar energy hub.

Does Angola have hydro power?

Several other rivers throughout the territory have conditions for smaller size

projects. Angola currently has around 3.7GW of active hydro power installed and producing. Additionally, there are five more hydro power projects under construction for energy production.

How much energy does Angola use?

In 2019, approximately 54.6% of the final energy consumed in Angola came from renewable sources, with biomass contributing 46.9% and hydropower 7.7%. The electrification rate in Angola remains relatively low compared to many other countries, but the government's efforts have shown progress.
