# Are lithium battery packs safe in Cambodia

## Overview

---

Though widely used, lithium batteries are classified as Dangerous Goods by the International Air Transport Association (IATA) as they're highly flammable, they react sensitively to environmental factors, and can cause fires if damaged. Are lithium-ion batteries safe?

Lithium-ion batteries (LIBs) with excellent performance are widely used in portable electronics and electric vehicles (EVs), but frequent fires and explosions limit their further and more widespread applications. This review summarizes aspects of LIB safety and discusses the related issues, strategies, and testing standards.

Are Lib batteries safe?

Stable LIB operation under normal conditions significantly limits battery damage in the event of an accident. As a result of all these measures, current LIBs are much safer than previous generations, though additional developments are still needed to improve battery safety even further.

Why are lithium ion batteries used in portable electronics?

In addition, the battery market for portable electronics is currently dominated by LIBs because of their inherent advantages over other battery systems, such as high specific capacity and voltage, no memory, excellent cycling performance, little self- discharge, and wide temperature range of operation , .

Why are lithium-ion batteries important?

Efficient and reliable energy storage systems are crucial for our modern society. Lithium-ion batteries (LIBs) with excellent performance are widely used in portable electronics and electric vehicles (EVs), but frequent fires and explosions limit their further and more widespread applications.

Why is there a power shortage in Cambodia?

Cambodia is a tropical country in Southeast Asia with extreme heat waves sweeping across the country during the dry season. This results in the lack of hydropower which causes power shortages in Cambodia. Power shortages during the dry season shortens the lifespan of lead-acid batteries, which may lead to network availability issues.

Are BoostLi batteries better than lead-acid batteries?

BoostLi batteries have better adaptability to poor power grid situations by maintaining better SOH and backup time compared to lead-acid batteries. The solution significantly improves network availability.
