A solar panel is a collection of solar cells that convert sunlight into electricity. These cells are made from materials like silicon and aluminum, which absorb photon particles from sunlight. After hitting the cell, the photon knocks loose an electron, creating a flow of electricity. Multiple.

The main component of a solar panel is the solar cell, which can generate electricity from sunlight. Another name for solar cell is photovoltaic. Note that photo means light and voltaic means electricity. Solar cells are usually made of a type of semiconductor metal such as germanium, silicon.

Choosing the right solar panel depends on how much power you need. Here's a simple breakdown to help you decide: 50 Watts: Perfect for low-power uses like security cameras, garden lighting, or charging small batteries. 100 Watts: Great for running LED lights, charging phones, or powering small TVs.
