Cambodia emergency energy storage power supply price

Overview

What is Cambodia's electricity supply?

The composition of Cambodia's electricity supply is a blend of domestic production and international imports. In 2022, over 25% of the country's energy was imported from Thailand, Laos and Vietnam. Due to the country's high reliance on hydropower, power demand typically outstrips domestic supply during the dry season.

How can Cambodia reduce electricity costs?

Enhancing electrification rates and reducing electricity costs in Cambodia requires a multi-pronged strategy. First, Cambodia's existing electricity demand and supply gap need to shrink. One of the main ways the country can achieve this is to reduce the rapidly increasing demand for energy.

Why are electricity prices so high in Cambodia?

The high electricity cost for consumers results from the quantity of imported energy and the outdated energy grid. Electricity prices in Cambodia are among the highest in the region, topping USD 0.137 per kWh. This is considerably more than neighbouring countries.

What is Cambodia's New Power Development Plan?

In its new Power Development Plan, Cambodia plans to invest US\$1.8bn to improve its electricity transmission network. Following the Government's decision to stop building new coal plants, a new 900 MW gas plant is expected. The Ministry of Mines and Energy (MME) is in charge of the energy policy through the General Department of Energy (GDE).

Why is Cambodia's energy security so important?

Cambodia's electricity grid is ageing and cannot meet the country's rapidly growing energy demands. As a result, the country's electricity prices are some of the highest in the region, and its infrastructure suffers from quality issues.

Tackling these challenges is a core component of the country's long-term energy security.

Why is electricity a key component of Cambodia's long-term energy security?

Tackling these challenges is a core component of the country's long-term energy security. Electricity in Cambodia is at a crucial juncture as the nation aims to increase electrification rates and modernise its grid within the regional energy landscape.
