Can Lithuania undertake energy storage projects

Overview

Lithuania's Ministry of Energy has opened applications for a €102 million (\$106M) funding program aimed at developing large-scale energy storage systems to support the country's electricity transmission network.

Lithuania's Ministry of Energy has opened applications for a €102 million (\$106M) funding program aimed at developing large-scale energy storage systems to support the country's electricity transmission network.

Lithuania's government will publish a call for applications tomorrow (10 October) for a scheme to support energy storage, which is deemed crucial to the country's energy security. The Baltic state's Ministry of Energy said earlier this week (7 October) that it has approved conditions for increasing.

The Lithuanian Ministry of Energy and Environment has approved additional funding for its energy storage procurement program after strong interest from potential beneficiaries. Meanwhile, Trina Storage has secured the first 180 MWh of battery projects in the country under its new.

Lithuania's Ministries of Energy and the Environment have jointly approved an additional €37 million in funding to expand the country's capital expenditure (capex) support for energy storage projects. The announcement, made on July 18, supplements an existing €102 million fund administered under.

The Lithuanian Ministry of Energy has launched a significant funding initiative to support high-capacity energy storage projects. With a call for proposals worth €45 million, this effort aims to bolster the country's energy security, accelerate its green transition, and support the burgeoning.

Only a day before cutting ties with the Russian power grid, the Baltic state announced the launch of a major energy storage procurement exercise. Lithuania has announced a EUR 102 million (\$ 105 million) energy storage tender in a bid to procure balancing services to the transmission system.

Lithuania's Ministries of Energy and Environment have approved an additional €37 million to expand capital expenditure support for energy storage projects.

This funding supplements an existing €102 million fund managed by the Environmental Project Management Agency (EPMA) during its first call. What is a new energy storage project in Lithuania?

The plan involves direct grants to support investments in the deployment of at least 1,200 MWh of new energy storage systems across Lithuania. The tender will be administered by the Environmental Project Management Agency (EPMA). The deadline for applications is June 17, 2025.

Why is Lithuania launching a major energy storage procurement exercise?

Only a day before cutting ties with the Russian power grid, the Baltic state announced the launch of a major energy storage procurement exercise. Lithuania has announced a EUR 102 million (\$ 105 million) energy storage tender in a bid to procure balancing services to the transmission system operator and ensure the resilience of its grid.

Will Lithuania install 800 MWh of energy storage facilities?

In the procurement exercise, Lithuania is seeking to install at least 800 MWh of energy storage facilities, which will be directly connected to the transmission network by the end of 2028.

Does Lithuania need a new energy system?

Lithuania imports a large share of its electricity needs, while bioenergy is taking the lead in domestic energy supply. By 2030, Lithuania wants to reduce its electricity imports by half and produce 70% of its electricity needs from domestic sources. It plans to complete its synchronisation with the continental European power system by early 2025.

Does energy security affect Lithuania's energy strategy?

With virtually no primary energy resources of its own, Lithuania progressed from a pro-nuclear to a renewable national energy strategy in just one decade. Based on the revised Copenhagen Securitization School, this article analyses energy security perceptions as a factor that determines the recent turn in Lithuanian energy strategy.

Did renewables play a significant role in the Lithuanian electricity sector?

A concession agreement was signed in the following year (Ministry of Energy, 2012). Here it needs to be highlighted that in the years leading to the new

strategy, renewables already played a significant role in the Lithuanian electricity sector (see Fig. 1).
