# **Cape Verde s regulations on wind-solar complementary communication base stations**

## Overview

---

Does Cape Verde have solar power?

In 2012 Cape Verde had an installed electricity generation capacity of around 300 MW, of which about 24% from wind power plants and 3% from photovoltaic stations. While solar power has an enormous potential as a source of renewable energy, natural conditions in Cape Verde are one of the best in the world for the production on wind energy.

What is the Cabo Verde national energy policy?

In 2008, the Council of Ministers approved the Cabo Verde National Energy Policy which sets out the overarching vision of achieving long-term independence from fossil fuels by promoting renewable energies and improving energy efficiency.

Does Cabo Verde have electricity?

Imported petroleum products constitute about 80 percent of Cabo Verde's total energy supply, while less than 20 percent comes from renewable sources, primarily wind and solar. Although 93 percent of the population has access to electricity, there are significant losses in the distribution grids, and electricity costs are extremely high.

What percentage of Cabo Verde's energy comes from imported petroleum products?

Includes a market overview and trade data. Imported petroleum products constitute about 80 percent of Cabo Verde's total energy supply, while less than 20 percent comes from renewable sources, primarily wind and solar.

Does Cabo Verde have a wind farm?

Wind: Cabo Verde has relevant experience in the sector, including through a public-private partnership called Cabeolica. Energy generated by wind turbines feeds the national grid on several islands. Cabo Verde offers good

and reliable wind resources (18m/s).

Is Cape Verde a viable alternative to fossil fuels?

Solid waste can also represent an adequate option while ocean and geothermic energy are being tested, with uncertainties remaining as to their efficiency. Cape Verde has an estimated potential of 2,600 MW of renew-able energy, and more than 650 MW have been studied in concrete projects, which have lower production costs than fossil fuels.
