China s power station energy storage policy

Overview

The National Development and Reform Commission (NDRC) and the National Energy Administration (NEA) have set ambitious targets for energy storage capacity, aiming for 30 GW by 2025. These policies are complemented by financial incentives that encourage investment in energy storage.

The National Development and Reform Commission (NDRC) and the National Energy Administration (NEA) have set ambitious targets for energy storage capacity, aiming for 30 GW by 2025. These policies are complemented by financial incentives that encourage investment in energy storage.

China's National Energy Administration (NEA) has released the China New Energy Storage Development Report 2025, marking the first official and comprehensive government report dedicated to the country's rapidly advancing new energy storage (NES) sector. The report, jointly prepared by the NEA's.

China has published a national plan to promote large-scale energy storage facilities, encouraging investment and broader participation in the electricity market. The 'Special action plan for large-scale construction of new energy storage (2025-2027)' was published last Friday (12 September).

As China continues to lead the world in renewable energy production, the role of energy storage systems has become increasingly vital. These systems are essential for balancing supply and demand, enhancing grid stability, and facilitating the integration of intermittent renewable sources like solar.

China's power station energy storage policy

In terms of storage allocation policies, Xinjiang, Tibet, Inner Mongolia, and Gansu regions are required to equip a certain proportion of storage facilities in new energy projects.

The Energy Law of the People's Republic of China, promulgated in November 2024, proposed the rational layout and active, orderly development and construction of ...

The Energy Law of the People's Republic of China, promulgated in November 2024, proposed the rational layout and active, orderly development and construction of pumped storage power stations.

With Document 136 abolishing mandatory energy storage requirements and Document 394 pushing for comprehensive electricity spot market coverage, this policy combo ...

China's National Energy Administration (NEA) has released the China New Energy Storage Development Report 2025, marking the first official and comprehensive government ...

China aims to add more than 100 GW of new energy storage (primarily battery storage, excluding pumped hydro) by 2027, according to a new action plan presented by ...

China's National Energy Administration (NEA) has released the China New Energy Storage Development Report 2025, marking the first official and comprehensive government report dedicated to the country's ...

On May 26, 2022, China's first salt cavern compressed air energy storage started operations in Changzhou, Jiangsu province, marking significant progress in the research

and ...

The policy and regulatory roadmap is aimed at pushing China's installed base of large-scale energy storage - primarily lithium-ion battery energy storage systems (BESS) - to ...

The policy and regulatory roadmap is aimed at pushing China's installed base of large-scale energy storage - primarily lithium-ion battery energy storage systems (BESS) - to 180GW by the end of 2027.

This study not only contributes to further improving China's NES-related policies, but also provides a useful reference for the formulation and implementation of energy storage policies in other ...

China aims to add more than 100 GW of new energy storage (primarily battery storage, excluding pumped hydro) by 2027, according to a new action plan presented by authorities on Friday.

Understanding energy storage is crucial for grasping the future of energy in China. In this guide, readers will explore the various types of energy storage technologies currently in ...

Imagine being forced to buy a bicycle with training wheels every time you wanted to ride - that's essentially what China's renewable energy sector endured with mandatory energy storage ...
