Overview

What is a containerized battery energy storage system?

Containerized Battery Energy Storage Systems (BESS) are essentially large batteries housed within storage containers. These systems are designed to store energy from renewable sources or the grid and release it when required. This setup offers a modular and scalable solution to energy storage.

Are energy storage containers a viable alternative to traditional energy solutions?

These energy storage containers often lower capital costs and operational expenses, making them a viable economic alternative to traditional energy solutions. The modular nature of containerized systems often results in lower installation and maintenance costs compared to traditional setups.

Why should you choose a containerized energy system?

The modular nature of containerized systems often results in lower installation and maintenance costs compared to traditional setups. And when you can store up energy when it's inexpensive and then release it when energy prices are high, you can easily reduce energy costs.

Discover the benefits and features of Containerized Battery Energy Storage Systems (BESS). Learn how these solutions provide efficient, scalable energy storage for various applications.

Our containerized ESS products include not only state-of-the-art battery energy storage systems but also expert engineering services to support every phase of your project lifecycle.

Our utility-scale energy storage solution from 1 MWh and up covers the entire lifecycle, including demand analysis, system design, system integration, installation, commissioning, acceptance, and delivery.

Oregon Amperex offers high-capacity containerized energy storage solutions including 3.35MWh to 5MWh liquid cooled systems and 20'-45' power stations. With over 30 years of battery ...
