

## **PDEOZE PowerContainer**

# **Costa Rica s integrated 5G base station**

## Overview

---

Will a 5G mobile service be available in Costa Rica?

Liberty and Ericsson have signed a strategic contract to deploy the first 5G standalone (5G SA) mobile service in Costa Rica, marking a milestone in the digitalization of the country and the Central American region by utilizing a fully 5G-native infrastructure without relying on 4G elements.

Is 5G coming to Central America?

Standalone 5G is coming to Central America with the help of rival Nordic cellular vendors. Ericsson just signed a deal with operator Liberty to deploy a pure 5G standalone core in Costa Rica, which the Swedish vendor claims as a first for Central America — although that's debatable.

What is a 5G base station?

A 5G network base-station connects other wireless devices to a central hub. A look at 5G base-station architecture includes various equipment, such as a 5G base station power amplifier, which converts signals from RF antennas to BUU cabinets (baseband unit in wireless stations).

Is Ericsson the New Liberty 5G supplier?

Although this deal is new, Ericsson has been Liberty's core supplier for a while. "Ericsson has been the sole supplier of their core network," noted Bolan. Ericsson announces a Liberty 5G SA deal in Costa Rica, where Nokia previously announced a similar deal with rival RACSA.
