Czech energy storage high power supply wholesale price

Overview

Let's cut to the chase - pricing. The average Czech power storage vehicle wholesale price ranges between €18,000 and €45,000 depending on: Pro Tip: Many suppliers offer volume discounts - purchasing 10+ units could slash costs by 12-15%. How much does electricity cost in Czechia?

A paid subscription is required for full access. The average wholesale electricity price for the month of April 2025 in Czechia stood at 79.9 euros per megawatt-hour. In August 2022, the country recorded a peak in electricity prices of 477 euros per megawatt-hour. Get notified via email when this statistic is updated. *Provisional figure.

Will a battery storage system help Czech companies achieve net zero?

The high penetration of renewable generation projects in the region could deliver a large amount of clean energy and really accelerate the journey to net zero, but at the moment Czech companies are not in a position to reap the full benefits of solar and other renewable energy sources. To do so, battery storage will be essential.

How has the energy crisis impacted the Czech Republic?

With coal dominating the energy mix, the Czech Republic has traditionally enjoyed low electricity prices and a steady supply of domestic fuel. However, the recent energy crisis, together with pressure from stakeholders and regulatory bodies to decarbonise, has triggered an unprecedented shift in the country's energy market.

How does the Czech government cope with higher energy bills?

Unlike other European countries, the Czech Government has traditionally relied on the market to self-regulate, avoiding state intervention. This means that as prices rose, consumers and businesses had to cope with higher energy bills.

Why are Czech businesses investing in renewable projects without subsidies?

The subsidy increases to cover up to 75% of costs for community projects. But what we noticed at Wattstor is that Czech businesses are investing in renewable projects even in the absence of subsidies, because they have realised the strong business case for generating clean energy on site.

How much power does the Czech Republic produce in 2024?

In 2024 Czech generators produced about 68.7 TWh. Nuclear power supplied roughly 40–41% of that (≈ 28 TWh) – the single largest source. Coal-fired plants (mainly lignite) supplied about 33–34% (≈ 23.7 TWh). Renewables are a smaller but growing share. Photovoltaics alone reached record output (~ 3.9 TWh, about 5.7% of generation in 2024).
