Do you need battery storage, or energy storage, to go solar?

Here's why solar plus batteries can be beneficial, but aren't essential. If you've been researching solar, you've probably come across the words 'battery storage' or 'energy storage.' But what do those terms mean, and do you need.

Battery energy storage refers to systems that retain the energy your solar panels produce so that you can use it later. When you have battery storage, your solar panels store the power you don't immediately use in your battery until your home, business, or farm needs it. Then, when you're not.

Solar panels do not need battery storage to function, as they generate electricity during sunlight. However, adding battery storage improves energy efficiency by storing excess electricity. This combination provides cost savings and boosts energy independence, especially during power outages, using.
