Bidirectional electric vehicles (EV) employed as mobile battery storage can add resilience benefits and demand-response capabilities to a site's building infrastructure. A bidirectional EV can receive energy (charge) from electric vehicle supply equipment (EVSE) and provide energy to an external.

That's the magic of large energy storage vehicle solutions – essentially, giant battery packs on wheels that are rewriting the rules of energy access. From mining moguls to emergency responders, these mobile powerhouses are becoming the MVPs (Most Valuable Powerplants) for: Let's face it –.

Electric cars remain the main driver of battery demand, but demand for trucks nearly doubled Battery demand in the energy sector, for both EV batteries and storage applications, reached the historical milestone of 1 TWh in 2024. Demand for one average week alone in 2024 exceeded the total demand.
