Electric Energy Storage Equipment Procurement

Overview

This comprehensive guide explores the process of energy storage system procurement and explains how leveraging business intelligence and data analytics can improve outcomes for electric power projects. What is bulk energy storage & how can it help New York?

New York Secretary of State Walter Mosley said, “In looking ahead for the state's future, bulk energy storage can provide the ability to store excess electricity during times of lower usage or high renewable production and return that electricity to the grid during peak times when it’s needed most.

Can a project be eligible for a NYSERDA bulk energy storage program?

5 Participation in the utility procurements precludes a Project’s eligibility for the NYSERDA Bulk Energy Storage Program and NYSERDA’s Request for Proposals to procure Index Storage credits (ISCRFP25-1) New York State Electric & Gas Corporation Rochester Gas and Electric Corporation 2025 Bulk Power Energy Storage Request for Proposals.

Should bulk energy storage be added to New York's grid?

Adding bulk energy storage to New York’s grid will lower costs, optimize the generation and transmission of power, enhance energy grid infrastructure, and ensure the reliability and resilience of the State’s electricity system.

Why is energy storage important?

Like transmission, energy storage can help to manage supply and demand over broad areas of the electric system because it can provide both generation and load by converting excess electric power into another medium to be stored for later use.

What is technical assistance for distributed energy projects?

For assistance customizing these specifications to your project's needs, please reach out through the Technical Assistance for Distributed Energy Projects

portal. Provides federal agencies with a standard set of tasks, questions, and reference points to assist in the early stages of battery energy storage systems (BESS) project development.

How do energy storage contracts work?

For standalone energy storage contracts, these are typically structured with a fixed monthly capacity payment plus some variable cost per megawatt hour (MWh) of throughput. For a combined renewables-plus-storage project, it may be structured with an energy-only price in lieu of a fixed monthly capacity payment.
