# **French liquid flow energy storage project**

## Overview

---

Renewable developer and independent power producer (IPP) TagEnergy will soon start construction on the largest BESS project in France, a 240MW/480MWh project with Tesla providing BESS and EPC services.

Renewable developer and independent power producer (IPP) TagEnergy will soon start construction on the largest BESS project in France, a 240MW/480MWh project with Tesla providing BESS and EPC services.

PARIS, June 20, 2025 /PRNewswire/ -- Envision Energy, a global leader in green technology for, wind turbines, energy storage, and green hydrogen solutions, announced today that it has executed an EPC (engineering, procurement and construction) agreement to supply 120 MW / 240 MWh Lithium Iron.

We are aiming to develop 5 to 7 gigawatts (GW) of gross electricity storage capacity worldwide by 2030, thanks in particular to battery-based energy storage systems. To achieve this ambition, we are harnessing the technological expertise of our affiliate Saft. Learn more about our achievements and.

The objective of SI 2030 is to develop specific and quantifiable research, development, and deployment (RD&D) pathways to achieve the targets identified in the Long-Duration Storage Shot, which seeks to achieve 90% cost reductions for technologies that can provide 10 hours or longer of energy.

TagEnergy is an international developer and operator of storage and renewables. Image: TagEnergy. Renewable developer and independent power producer (IPP) TagEnergy will soon start construction on the largest BESS project in France, a 240MW/480MWh project with Tesla providing BESS and EPC services.

Construction work to build the world's largest flow battery has commenced at the strategic and critically important electrical grid interconnection point on the borders of German, France and Switzerland, enabling the system to stabilise electricity flows across national borders and strengthening.

Global energy storage capacity was estimated to have reached 36,735MW by the end of 2022 and is forecasted to grow to 353,880MW by 2030. France had 90MW of capacity in 2022 and this is expected to rise to 359MW by 2030. Listed below are the five largest energy storage projects by capacity in.

## French liquid flow energy storage project

---

Unlike conventional batteries (which are typically lithium-ion), in flow batteries the liquid electrolytes are stored separately and then flow (hence the name) into the central cell, where they react in the charging and discharging phase.

With a total storage capacity of 61 MWh, this is the largest battery-based energy storage site in France. The battery-based ESS facility at the Carling platform came on stream ...

Built with a strong emphasis on proven design, safety, and long-term reliability, Envision's energy storage products are engineered for secure and dependable performance ...

Flow batteries offer unmatched safety and environmental performance for grid-scale storage. Thanks to its water-based electrolytes and inherently stable chemistry, the ...

One challenge in decarbonizing the power grid is developing a device that can store energy from intermittent clean energy sources such as solar and wind generators. Now, ...

Full operational capacity is planned for 2030. At that point, the facility is expected to become not only the world's largest redox flow battery but also one of Europe's most important ...

The project will be built in the commune of Cernay-lès-Reims, in the department of Marne, and is around five times bigger than the largest system online in France today, ...

China's first megawatt iron-chromium flow battery energy storage demonstration project, which can store 6,000 kWh of electricity for 6 hours, was successfully tested and was ...

Unlike conventional batteries (which are typically lithium-ion), in flow batteries the liquid electrolytes are stored separately and then flow (hence the name) into the central cell, where ...

With a total storage capacity of 61 MWh, this is the largest battery-based energy storage site in France. The battery-based ESS facility at the Carling platform came on stream in May 2022 and comprises 11 ...

The project will be built in the commune of Cernay-lès-Reims, in the department of Marnes, and is around five times bigger than the largest system online in France today, TagEnergy said. It is being financed by a ...

Listed below are the five largest energy storage projects by capacity in France, according to GlobalData's power database. GlobalData uses proprietary data and analytics to ...

Enter liquid flow energy storage projects - the unsung heroes of renewable energy systems. These chemical wizards currently power a \$33 billion global industry [1], storing enough ...
