station**

Overview

Designed to ensure that by 2033 Bahamas has a modern, diversified and efficient energy sector, providing Bahamians with affordable energy supplies and long-term energy security towards enhancing international competitiveness and sustainable prosperity.

Designed to ensure that by 2033 Bahamas has a modern, diversified and efficient energy sector, providing Bahamians with affordable energy supplies and long-term energy security towards enhancing international competitiveness and sustainable prosperity.

This is the Energy Report Card (ERC) for 2023 for the Bahamas. The ERC also includes sectoral data and information on policies and regulations; workforce; training and capacity building; and related areas. The data and information that are available in the ERC were mostly provided by the government.

NASSAU, BAHAMAS- The number of renewable energy systems in The Bahamas increased by 13.6 percent in 2024, according to the Utilities Regulation and Competition Authority's (URCA) 2024 Annual Report. The report noted a 12.71 percent increase in installed renewable energy capacity, reflecting.

The Government of The Bahamas is pleased to officially release *Securing The Bahamas' Energy Future: The Davis Administration's Historic Approach to Energy Reform* —a comprehensive report that outlines the national strategy to deliver reliable, affordable, and sustainable electricity to all.

This document presents The Bahamas' Energy Report Card (ERC) for 2021. The ERC provides an overview of the energy sector performance in The Bahamas. The ERC also includes energy efficiency, technical assistance, workforce, training and capacity building information, subject to the availability of.

The Bahamas has received its first-ever financing from the latest multilateral lender it has joined in the form of a \$100m loan to aid the National Energy Policy's implementation. The Development Bank of Latin America and the

Caribbean (CAF), in which The Bahamas became a shareholder in November.

ges in The Bahamas since it was published. This has compelled the Government to review the 2013 – 2033 National Energy Policy and formulate the NEP 2025 – 2030, which incorporates current developments in the Energy Sector. The NEP 2025 – 2030 aims to encourage the further development of electricity. How will technology transform the Bahamas' energy system?

Advanced technologies are being integrated into the nation's energy framework to create a more resilient grid, tailored to meet the unique needs of New Providence and the Family Islands. This transformation will incorporate a variety of sustainable energy sources, including: Microgrids will play a key role in The Bahamas' energy transformation.

How much does electricity cost in the Bahamas?

fordability and Price ExpectationsAffordability remains a central objective of the Davis Administration's energy reform programme. Historically, The Bahamas has had some of the highest electricity costs in the region, with consumers paying between \$0.28 and \$0.35 per kilowatt-hour, largely due to dependence on imported fuel.

Why does the Bahamas rely on fossil fuels?

Both the BEC and Grand Bahama Power rely entirely on fossil fuels to power their operations. Because of the instability of the global oil supply and the environmental damage associated with fossil fuels, the Bahamas began actively pursuing alternative energy sources in the twenty-first century.

Why did the Bahamas start pursuing alternative energy sources?

Because of the instability of the global oil supply and the environmental damage associated with fossil fuels, the Bahamas began actively pursuing alternative energy sources in the twenty-first century. Climate change and rising sea levels are a particular concern to low-lying island nations such as the Bahamas.

Is the Bahamas a sustainable country?

The Bahamas, an archipelago located in the Caribbean, has historically relied on fossil fuels to meet its energy needs, with nearly 100% of its electricity generated from oil and natural gas as of 2024. The government aims to shift towards sustainability, setting a target to generate 30% of its energy from

renewable sources by 2033.

Why are fuel surcharges so high in Bahama?

ected from volatile global markets. This left the national energy system vulnerable to fuel price fluctuations, supply chain disruptions, and geopolitical instability. For Bahamian consumers, this translated into high and unpredictable fuel surcharges

How many billions of dollars have been invested in the Bahamas en

Advanced technologies are being integrated into the nation's energy framework to create a more resilient grid, tailored to meet the unique needs of New Providence and the Family Islands. This transformation will incorporate a variety of sustainable energy sources, including: Microgrids will play a key role in The Bahamas' energy transformation.

Affordability and Price Expectations Affordability remains a central objective of the Davis Administration's energy reform programme. Historically, The Bahamas has had some of the highest electricity costs in the region, with consumers paying between \$0.28 and \$0.35 per kilowatt-hour, largely due to dependence on imported fuel

It highlights the development of utility-scale renewable energy, the introduction of liquefied natural gas (LNG), the overhaul of transmission and distribution networks, and the ...

Transitioning to solar power and natural gas will improve energy security by providing a more reliable and resilient power system. The solar plant can generate electricity ...

With solar and wind energy systems becoming more prevalent, energy storage will play a critical role in ensuring that excess power can be stored and used during periods of low ...

The Bahamas has received its first-ever financing from the latest multilateral lender it has joined in the form of a \$100m loan to aid the National Energy Policy's implementation.

Transitioning to solar power and natural gas will improve energy security by providing a more reliable and resilient power system. The solar plant can generate electricity even during grid outages, and the ...

Under the New Energy ERA 70MW of solar power will be added and 35MW of Battery Energy Storage Systems (BESS) to the existing grid, enhancing energy reliability and reducing dependency on traditional ...

The project is a grid-tied solar photovoltaic (PV) system located adjacent to Blue Hills Power station and is designed to provide renewable energy, enhancing grid stability sustainability to ...

With solar and wind energy systems becoming more prevalent, energy storage will play

a critical role in ensuring that excess power can be stored and used during periods of low generation, helping to stabilize the ...

The ERC provides an overview of the energy sector performance in The Bahamas. The ERC also includes energy efficiency, technical assistance, workforce, training and capacity building ...

It highlights the development of utility-scale renewable energy, the introduction of liquefied natural gas (LNG), the overhaul of transmission and distribution networks, and the establishment of new public-private ...

Under the New Energy ERA 70MW of solar power will be added and 35MW of Battery Energy Storage Systems (BESS) to the existing grid, enhancing energy reliability and ...

Designed to ensure that by 2033 Bahamas has a modern, diversified and efficient energy sector, providing Bahamians with affordable energy supplies and long-term energy security towards ...

The Bahamas, an archipelago located in the Caribbean, has historically relied on fossil fuels to meet its energy needs, with nearly 100% of its electricity generated from oil and natural gas as ...

Goal 2: The Bahamas will have a modern energy infrastructure that enhances energy generation capacity and ensures that energy supplies are safely, reliably, and affordably transported to ...
