Why do you need a lithium-ion battery storage cabinet?

As lithium-ion batteries become more integrated into daily industrial use, ensuring their safe storage is essential. The right lithium-ion battery storage cabinet not only protects your assets but also enhances workplace safety and regulatory compliance.

Are battery storage cabinets safe?

Without the right separation, climate, and safety measures in place, storing batteries on-site poses a dormant but potentially expensive and devastating threat to your work environment. CellBlock Battery Storage Cabinets are a superior solution for the safe storage of lithium-ion batteries and devices containing them.

Can a lithium-ion battery cabinet withstand a fire?

You should ensure all storage cabinets for lithium-ion batteries are rated for fires starting from inside the cabinet. Without this, the protection is inadequate. The cabinet must withstand an internal fire for at least 90 minutes; it must be tested and approved to SS-EN-1363-1 for internal fire. 2. Ensure that your cabinet as integral ventilation.

Are flammable storage cabinets safe for lithium-ion use?

But that doesn't make them safe for lithium-ion use. A battery fire generates an intense internal blaze with extreme heat and smoke. Flammable storage cabinets are not designed to contain this. The fire breaks out, and in some

cases the cabinet doors may even burst open due to pressure build-up.

Can a lithium battery storage cabinet be used as a charging station?

Many lithium battery storage cabinets double as charging stations. If you plan to charge batteries in storage, ensure the cabinet includes: Factory-installed, grounded metal-encased electrical outlets. Overheat and short-circuit protection. Rear-mounted socket strips within the cabinet. Retrofitting a cabinet to allow charging can introduce risks.
