What temperature does a battery cabinet need to be charged & discharged?

At the extremes of this temperature range, the cabinet may limit the charging or discharging power to extend battery life. Charge temperature -20~55°C  
Discharge temperature -20~55°C. Table of Contents 1.

How often does the energy storage cabinet operate?

Intermittent operation: The energy storage cabinet operates at a variable frequency every month and cannot be guaranteed to operate every day. No use for a long time: The energy storage cabinet has not been activated for more than 3 consecutive months (The cabinet must be charged to 50% SOC before being suspended from usage).

How do you power off a DC high-voltage box?

- Power-off steps: Step 1: Set the cabinet to the standby status and stop charging and discharging. Step 2: Disconnect the external circuit breakers, including the external auxiliary power supply or UPS. Step 3: Press the control power button on the DC high-voltage box.

What type of cable should be used for outdoor cabinet?

recommended (min. 100W). 2) The cable length between the outdoor cabinet and the external distribution cabinet depends on project and site conditions. AWG #1 power cable is recommended (AWG #1 AC400V cables for A/B/C, and AWG #4 AC400V cables for N/PE) 3) Category 6 network cables are commended for the outdoor cabinet.
