

## PDEOZE PowerContainer

# Inverter with colloidal battery

 *easy to install and use*

 *World wide Products*

 *faster charging and discharging*

 *Multiple protection with alarm systems*

**Can save energy**

*the battery capacity can be increased freely and flexibly according to the situation of home use.*

*Rechargeable lithium batteries use safe LiFePO4*

## Overview

What is a hybrid inverter?

Hybrid inverters are essentially two inverters in one; they combine a solar inverter and a battery inverter into one simple unit. These advanced inverters use solar energy to power your home, charge a battery or send excess energy into the electricity grid. Most hybrid inverters can also provide emergency backup power during a blackout.

Can a hybrid inverter work with a HV battery?

Additionally, most high-voltage hybrid inverters can only work with one type of HV battery, which is often the same brand as the inverter. However, HV batteries generally offer more continuous and peak power per kWh, which is useful if a high backup load power is needed.

Why should you use boost battery & inverter with Schneider pulse?

With fewer steps of power conversion, Boost battery can charge more efficiently from solar for maximum electricity bill savings. When installed with Schneider Pulse, Boost and Inverter provide backup power to protect the home from outages. Need help?

Quickly and easily find the right products and accessories for your applications.

How do I choose a hybrid inverter?

When evaluating a hybrid inverter, it's important to inquire about these capabilities and how they can be customized to suit your needs and preferences. Jason Svarc is an accredited solar and battery specialist who has been designing and installing solar and battery systems for over a decade.

What is Schneider boost & inverter?

Schneider Boost and Inverter provide an easier solution for the increasingly

complex needs of solar and battery installations. With fewer steps of power conversion, Boost battery can charge more efficiently from solar for maximum electricity bill savings.

Are hybrid inverters better than off-grid?

Due to the higher battery voltages ranging from 150 to 500V, they can also deliver the same power using much smaller gauge cables, making HV systems cheaper and easier to install. Like off-grid inverters, hybrid inverters must be used with the correct battery; they are not compatible with both low-voltage (48V) and high-voltage (HV) batteries.
