Island New Energy Storage Order

Overview

What is New York state's energy storage plan?

New York State aims to reach 1,500 MW of energy storage by 2025 and 6,000 MW by 2030. Energy storage is essential for creating a cleaner, more efficient, and resilient electric grid. Additionally, these projects will provide meaningful benefits to Disadvantaged Communities and Low-to-Moderate Income New Yorkers.

What is New York's energy storage goal?

New York's Climate Leadership and Community Protection Act (Climate Act) codified a goal of 1,500 MW of energy storage by 2025 and 3,000 MW by 2030. In June 2024, New York's Public Service Commission expanded the goal to 6,000 MW by 2030.

How will energy storage affect New York's energy grid?

In June 2024, New York's Public Service Commission expanded the goal to 6,000 MW by 2030. Storage will increase the resilience and efficiency of New York's grid, which will be 100% carbon-free electricity by 2040. Additionally, energy storage can stabilize supply during peak electric usage and help keep critical systems online during an outage.

How much energy storage does New York have?

New York has awarded about \$200 million to support about 396 MW of operational energy storage assets and has more than 581 MW of additional storage "under contract with the State and moving towards commercial operation" as of April 1, the governor's office announcement said.

In line with requirements set out by the PSC in the June 2024 Order, NYSERDA proposes to procure 200 MW of 8+ hour-duration storage capacity in each 1,000 MW ...

The biggest battery project in New York has been canceled in a major victory for the nascent nationwide grassroots movement against energy storage development. It's still a ...

New York plans to hold the first of three bulk energy storage procurements later this

year as an Aurora Energy Research report ...

On February 14, 2025, the New York Public Service Commission (PSC) issued an Order approving NYSERDA's draft Retail and Residential Implementation Plan with modifications, ...

Regulators earlier this month approved a scheme to support grid-scale energy storage facilities, aligned with New York's 6GW by 2030 policy target.

New York plans to hold the first of three bulk energy storage procurements later this year as an Aurora Energy Research report forecasts 30 GW of in-state storage capacity ...

The "2024 Energy Storage order established a goal of deploying 1,500 megawatts of retail energy storage and 200 MW of residential energy storage by 2030." In February 2025, the New York ...

Highlights of the 2024 Order include: New York State's energy storage target is set at 6 GW (6,000 MW) by 2030, expanding on the existing Climate Act goal of 3 GW by 2030.

Hochul announced plans in January 2022 to double New York's previous energy storage goal of 3 GW by 2030. The state released a draft road map in December 2022 ...

Regulators earlier this month approved a scheme to support grid-scale energy storage facilities, aligned with New York's 6GW by 2030 policy target.

Energy storage is essential to a resilient grid and clean energy system. Learn about the types of energy storage, available incentives, and more.

On December 13, 2018, the New York State Public Service Commission (Commission)

issued the Order Establishing Energy Storage Goal and Deployment Policy ...

Hochul announced plans in January 2022 to double New York's previous energy storage goal of 3 GW by 2030. The state released a draft road map in December 2022 showing how it would achieve its

In line with requirements set out by the PSC in the June 2024 Order, NYSERDA proposes to procure 200 MW of 8+ hour-duration storage capacity in each 1,000 MW solicitation, which otherwise will only require a ...
