What is a prefabricated substation?

Prefabricated substations with up to 420 kV : Siemens Energy provides a large range of prefabricated substations that are equally suited for either temporary or permanent use in challenging grid expansion- and maintenance programs or as emergency response.

Does Siemens Energy offer a pre-commissioned substation solution?

Depending on customer requirements Siemens Energy can deliver a fully pre-commissioned substation solution equipped with power transformers as well as high- and medium voltage, making it the most cost-effective solution to simplify your on-site schedule. Skid-mounted solutions can be delivered with GIS, AIS and Dead Tank arrangements.

What is included in a grid substation?

Completely equipped it contains high voltage GIS, transformer unit, control, protection, cabling and power supply. The independent grid substations up to 420 kV can be installed plug and play and commissioned in days at the location of demand.

What are the benefits of prefabricated substations?

This way, the prefabricated substations can bring time savings of up to 30% in substation construction. They also reduce the risk exposure significantly thanks to: Reduced duration of site works and less need of skilled labor. Siemens Energy portable power solutions can increase the resiliency of a power grid and help ensure uninterrupted service.

What are Siemens Energy portable power solutions?

Siemens Energy portable power solutions can increase the resiliency of a power grid and help ensure uninterrupted service. They provide a quick and efficient solution for the emergency restoration of power in the case of

equipment failure.

What are Siemens Energy prefabricated power solutions?

Siemens Energy prefabricated power solutions enable faster and more reliable grid connection for power-critical infrastructures such as electrical generation or process industries, and they ensure little exposure to site work contingencies. Remote or hostile environments usually lead to high labor costs.
