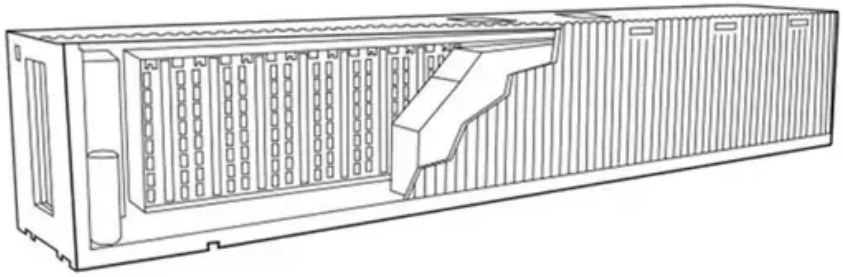
Optimal configuration of solar system energy storage



Overview

What are the advantages of optimal configuration method of energy storage?

3. The proposed optimal configuration method of energy storage can improve the operation flexibility of power system and the utilization of renewable energy generation. Therefore, it overcomes the disadvantages of traditional transmission network expansion planning, such as high investment cost and poor economic performance.

What determines the optimal configuration capacity of photovoltaic and energy storage?

The optimal configuration capacity of photovoltaic and energy storage depends on several factors such as time-of-use electricity price, consumer demand for electricity, cost of photovoltaic and energy storage, and the local annual solar radiation.

What is the optimal configuration model of energy storage?

Based on renewable energy output scenarios generated in Section 2 and congestion information provided in Section 3, this section constructs an optimal configuration model of energy storage. This model takes the uncertainty of renewable energy outputs into consideration, so that it enhances the rationality and feasibility of the optimal results.

What is the energy storage capacity of a photovoltaic system?

The photovoltaic installed capacity set in the figure is 2395kW. When the energy storage capacity is 1174kW h, the user’s annual expenditure is the smallest and the economic benefit is the best. Fig. 4. The impact of energy storage capacity on annual expenditures.

How can energy storage be reasonably configured?

If the key components causing the transmission congestion are evaluated and identified, then energy storage can be reasonably configured. It absorbs

energy when the components are congested and releases energy during the uncongested periods.

What is the optimal energy storage configuration capacity when adopting pricing scheme 2?

The optimal energy storage configuration capacity when adopting pricing scheme 2 is larger than that of pricing scheme 0. By the way, pricing scheme 0 in Fig. 5 (b) is the electricity price in Table 2.
