Power Plant Automation

Overview

Power plant automation refers to the use of advanced technology and digital systems to manage and operate power plants more efficiently and safely. How has automation changed the Power Plant Industry?

Automation software and controls for power plant assets have changed dramatically from the original analog card versions that still exist in plants across the world. The digitalization of the industry presents many new opportunities for existing power plants—specifically within the context of operations and plant maintenance efficiency.

What are autonomous power plants?

Autonomous power plant represents the next era of power generation, capable of managing complex operations, supporting you making informed decisions based on enhanced data analytics, and optimizing their performance with minimal or no human intervention.

Why should you choose ABB for your power plant automation system?

Automation. Evolution. Solution. You need to run secure and reliable solutions for your power plant. We provide a comprehensive range of automation applications to do exactly that. ABB is your reliable partner for world-class, plant-wide automation system solutions.

How secure is your autonomous power plant?

Autonomous power plants require robust cybersecurity to protect critical infrastructure. Siemens Energy employs stringent security measures including: Our integrated cybersecurity approach ensures your autonomous power plant remains secure against evolving cyber threats. Learn more about Siemens Energy cybersecurity solutions.

How does a power plant operate independently?

Power plant operates independently with self-optimizing capabilities, handling

all aspects of operation and emergencies. Reducing human involvement to strategic oversight and regulatory roles. Autonomous power plants require robust cybersecurity to protect critical infrastructure. Siemens Energy employs stringent security measures including:

Why should you choose Siemens Energy for autonomous power generation?

Autonomy is a journey, not a destination. Siemens Energy partners with you to progressively integrate advanced technologies, tailoring solutions to your operational needs and regulatory environment for a smooth transition to autonomous power generation. Full manual operation with less automation.

Jul 8, 2025 · Dow has charted a strategic path to unify process automation across its global operations, demonstrating how a single DCS platform can boost reliability, lower costs and empower engineering talent.

Future-oriented platforms for automation and electrical systems with open interfaces for new technologies Consistent, intuitive operator stations with power plant specific functionality, well ...

4 days ago · Automation software and controls for power plant assets have changed dramatically from the original analog card versions that still exist in plants across the world. The ...

Oct 31, 2025 · Maximize visibility across generating assets with end-to-end power plant automation solutions for smart and reliable energy production.

5 days ago · Explore our autonomous power plant solutions that utilize advanced technologies to boost your plant's performance through robotics and smart automation.

ABB is your reliable partner for world-class, plant-wide automation system solutions. We devise a flexible package aligned with your needs and budget to provide new systems, and service and evolve your plant's existing ...

ABB is your reliable partner for world-class, plant-wide automation system solutions. We devise a flexible package aligned with your needs and budget to provide new systems, and service and ...

Discover how automation transforms routine tasks for power plant mechanics in electric
