# **Selling electricity from solar panels**

## Overview

---

Can you sell solar energy back to the grid?

According to the National Renewable Energy Laboratory (NREL), this two-way relationship between your property and the electrical grid makes selling solar power possible. Here's how it works: The most common method for selling solar energy back to the grid is through net metering.

Can you sell excess electricity from solar panels?

Selling excess electricity generated by solar panels offers a valuable opportunity to reduce energy costs and generate additional income. By understanding net metering, feed-in tariffs, and other revenue streams like SRECs, you can maximize the financial benefits of your solar system.

Can you sell unused solar energy?

This guide explores how you can benefit financially from selling unused electricity through net metering and feed-in tariff programs, highlighting the opportunities available in various states. Turning your solar installation into an income generator is a compelling aspect of solar energy adoption.

Can you sell solar power without battery storage?

Without battery storage, this excess electricity flows back into the utility grid for other customers to use. According to the National Renewable Energy Laboratory (NREL), this two-way relationship between your property and the electrical grid makes selling solar power possible. Here's how it works:.

Can solar panels make you money?

Imagine this: your solar panels are soaking up the sun, powering your home, and at the same time, making you money. This is the reality for many homeowners who sell excess solar energy back to the grid. In fact, in states like California, some homeowners can earn up to \$3,000 a year just by exporting extra electricity.

Do utility companies pay for solar energy sent back to the grid?

You'll first need to determine if your utility company offers compensation for solar energy sent back to the grid. Some states have net metering laws that require utility companies to pay homeowners for the excess energy produced by their solar panels. These states often mandate a specific rate per kWh, ensuring that you're fairly compensated.
