State Grid invests in 5G base stations

Overview

Will China build a 5G base station next year?

Technicians from China Mobile check a 5G base station in Tongling, Anhui province. [Photo by Guo Shining/For China Daily] China aims to build over 4.5 million 5G base stations next year and give more policy as well as financial support to foster industries that can define the next decade, the country's top industry regulator said on Friday.

How many 5G smart grids will there be in 2024?

“We will continue to work with China Unicom and Huawei to expand the footprint of 5G smart grids in the electric power sector,” added Wang, who estimates that there will be 300,000 5G connections and 150,000 RedCap devices in the sector by June 2024.

Why do we need a 5G base station?

The limited penetration capability of millimeter waves necessitates the deployment of significantly more 5G base stations (the next generation Node B, gNB) than their 4G counterparts to ensure network coverage . Notably, the power consumption of a gNB is very high, up to 3-4 times of the power consumption of a 4G base stations (BSs).

Does 5G work in power grids?

This shows the industry’s recognition of their achievements in applying 5G in power grids as 5G smart grids enter the stage of large-scale commercial rollout. The inclusive 5G smart grid solution was jointly developed by the State Grid, China Unicom, Huawei, and TD Tech based on the extensive 5G networks built by China Unicom.

Will 5G Revolution & 6G innovation be a priority next year?

The move comes as the country charted its vision for industrial growth during a two-day work conference of the Ministry of Industry and Information

Technology. With 4.19 million 5G base stations already in operation, the industry regulator said that "promoting 5G revolution and 6G innovation will be one of the priorities" next year.

Who are China's 5G operators?

Chinese main operators are China Mobile, China Telecom and China Unicom. In addition to its expected expansion in the 5G field, China noted that it is also set to begin trials for 10-gigabit optical networks and enhance computing power infrastructure, reflecting the growing demand for artificial intelligence (AI) technologies.
