How much green energy does Uruguay use?

In 2016, even before several more renewables projects went online, it hit 94.5 percent green energy. In 2019, according to an analysis by the Uruguayan company SEG Engineering, the country ran on 98 percent renewable energy.

How will the energy project shape Uruguay's energy landscape?

Elisa Facio, the head of the ministry, emphasized that the project outlines the key ideas and challenges that will shape Uruguay's energy landscape. One of the primary themes is the projected increase in energy demand, prompting the need for comprehensive planning and forward-looking policies.

What percentage of energy is generated in Uruguay?

Hydroelectric accounted for nearly 56 percent of generation, wind 34 percent, bioenergy 6 percent, solar just under 3 percent, with fossil fuel coming in last at 2 percent. Wind energy came in second only to hydropower, accounting for nearly 34 percent of the energy generated in Uruguay that year.

How much does Uruguay's energy bill cost a year?

Even in years with average rainfall, costs could often skyrocket to \$1.1 billion a year. According to UTE, droughts and fluctuations in oil pricing threatened to more than double that, bringing Uruguay's annual energy bill to \$2.5 billion.

What is Uruguay doing to promote electric mobility?

Another significant initiative was the Subite program, which supported Uruguay's transition to electric mobility. This initiative included an investment of more than \$94 million to encourage the purchase of electric vehicles, aligning with the country's long-term sustainability goals.

What is the second pillar of energy security in Uruguay?

Reliability and Security: The second pillar focuses on guaranteeing the reliability and security of Uruguay's energy supply. This involves diversifying energy sources and establishing secure international markets to ensure the country's energy infrastructure is resilient to global changes.
